PROFILE SUMMARY

Results-driven Engineering student and Tech Lead at BezgoFresh, with hands-on expertise in Python, GUI development, and SQLite-based ERP systems. Proven experience in designing and deploying custom desktop applications to digitize and streamline last-mile delivery operations. Adept at full-stack application development, computer vision, and data-driven problem solving, with a strong foundation in DSA and system design.

EDUCATION

2022 - 2026

CMS COLLEGE OF ENGINEERING AND TECHNOLOGY

- BTECH AI & DS

EXCEL PUBLIC SCHOOL

- HIGHER SECONDARY SCHOOL
- SSLC

EXPERIENCE

Software Developer (1 year)

BezgoFresh (OGZEB Ventures Pvt Ltd), Kerala

Feb 2025 – Present

- Developed and deployed software solutions in a startup environment to improve operational efficiency
- Built and maintained mobile and desktop applications using Flutter and Python
- Designed backend-integrated systems and deployed applications on Microsoft Azure
- Created internal tools for logistics, analytics, and business operations
- Contributed to early-stage product development and system architecture

SKILLS

- Languages: Python, JavaScript
- Frameworks/Libraries: OpenCV, MediaPipe, PyTorch, Tkinter, Flutter
- Database: SQLite, Postgresql
- Cloud: Microsoft Azure, Railway
- Core Areas: AI/ML, Computer Vision, ERP Development, Mobile App Development
- Tools: Git (Basic), API Integration

LANGUAGES

- English: Fluent
- Malayalam : Fluent
- Hindi : Fluent
- Tamil : Intermediate
- French : Basic

- “AI-powered web application generating recipes using Groq API”

PROJECT EXPERIENCE

Bezgo Riders – Delivery Mobile Application (Flutter + Azure)

- Developed a Flutter-based Android application for delivery personnel with end-to-end backend integration
- Implemented core features including order assignment, delivery status tracking, and user workflow management
- Designed and deployed backend infrastructure on Microsoft Azure, ensuring scalability and reliable access
- Enabled real-time coordination for logistics operations, improving delivery efficiency

Fleet Dashboard – Logistics System (Web Application)

- Developed a web-based system to automatically assign delivery riders based on location, workload, and operational constraints
- Implemented backend logic for efficient order allocation and delivery optimization, improving speed and resource utilization
- Designed dynamic workflows to support real-time decision-making and scalable fleet management operations

AI-Based Business Forecasting System (Machine Learning)

- Developed predictive models using Random Forest and Prophet for revenue and demand forecasting
- Analyzed customer acquisition, retention, and order patterns
- Provided data-driven insights to support business strategy and planning
- Performed data preprocessing and feature engineering to improve model accuracy and reliability
